

Surface Treatment Tools

Brief Information:

Surface treatment tools enhance the quality, durability, and appearance of manufactured parts by cleaning, coating, or finishing.

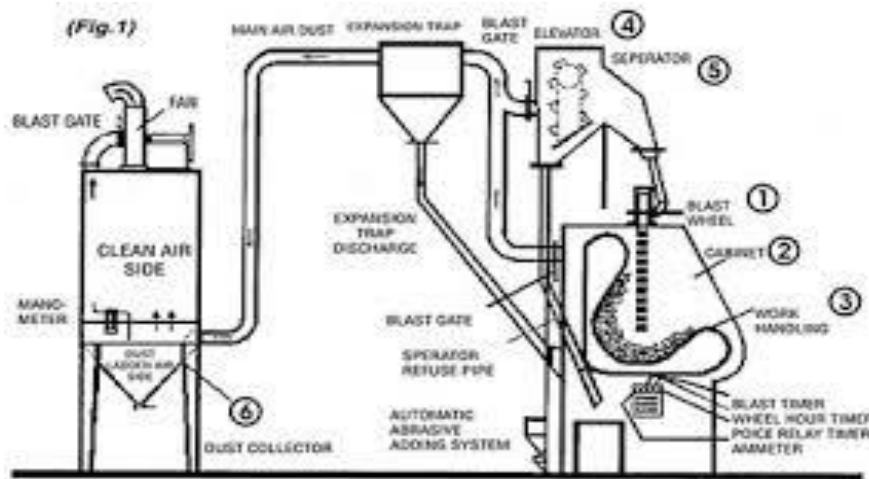

Types of Surface Treatment Tools:

1. **Cleaning and Polishing Tools** – Remove impurities and improve surface finish.
2. **Coating Tools** – Apply protective layers to metal or plastic surfaces.

Examples and Their Details:

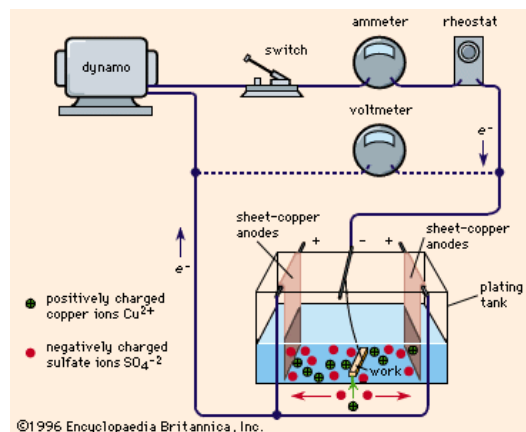

a) Shot Blasting Machines

- Clean metal surfaces using high-speed abrasives.

b) Electroplating Equipment

- Add a protective metal coating to components.

c) Powder Coating Machines

- Apply a durable protective layer of paint on metal parts.
